## WAGO ECBs with Optimized Communication Interfaces

Proven communication via IO-Link, Modbus RTU and the Manchester protocol expand the functions of WAGO's new ECBs.

These ECBs still save space in the control cabinet and protect against overloads and short-circuiting. The collected data can be used for monitoring, fault diagnostics and preventive maintenance.

WAGO ECBs can be configured via simple parameterization by remote full access. In the event of a trip, the device can be accessed directly. This allows new options to enhance system availability while minimizing downtime.

## WAGO Uninterruptible Power Supplies (UPS)

In the event of brief power failures, WAGO Uninterruptible Power Supplies (UPS) continue to provide DC power, ensuring safe system operation. For prolonged power outages, WAGO UPS solutions can keep potentially critical processes in a safe state, preventing unwanted impacts and data loss. The buffer or bridging time required, and thus the design of the uninterruptible power supplies, depends on the connected load and is determined before installation. This factor dictates the type and size of the energy storage element.

## WAGO PFC300 Controller

With its large 2 GB memory and the powerful 64 bit dual-core processor, the PFC300 (750-8302) can control and regulate larger applications where other controllers would run up against performance limits. Typical applications include the process industry and building automation, as well as conventional mechanical engineering.

The controller has two Gigabit ETHERNET ports and an RS-485 interface with a terminating resistor that can be set via software. The PFC300 can communicate with external devices (e.g., energy meters) via a Modbus RTU interface. A USB-C interface is also available for application and firmware updates or integration.

Manufacture-independent IEC programming of the controller is possible via CODESYS per IEC 61131-1 or via the Web-based management interface. It runs on an open Linux® operating system with RT preemption patch and has extensive security functions. The PFC300 is also Docker®- and cloud-capable, supporting integration of third-party applications. This makes the PFC300 future-proof and a good choice for more than just conventional PLC applications.

## WAGO Compact Controller 100 Range Extension

The new variant of WAGO Compact Controller 100 with configurable I/Os (multi-I/O), users can freely choose whether to use specific channels as inputs or outputs. The controller with multi-I/Os has a more powerful dual-core processor and an additional RS-485/RS-232 interface. Thanks to an optional mains filter, the WAGO Compact Controller 100 also features more robust electrical properties.

WAGO also introduced versions of the Compact Controller 100 with CAN and an integrated DALI line for lighting automation applications. In this certified per DALI-2 standard IEC 62386 version, the controller has preloaded applications for building automation, making it a custom-configurable lighting management system.

## Spring Pressure Connection Technology

Vibration-Proof ● Fast ● Maintenance-Free

### Push-in CAGE CLAMP®

#### The Universal Push-In Connection

A conductor range from 0.14 to 25 mm<sup>2</sup>

#### Easy to Use

This type of connection allows conductors to be terminated in two different ways:

- Universal termination of all conductor types: Open the clamping unit using an operating tool, insert a conductor, remove the operating tool – done.
- Push-in termination: Simply push a conductor into unit – done. Terminate rigid conductors, such as solid, stranded and ferruled, fine-stranded conductors, by simply pushing them in – no operating tool needed.

### CAGE CLAMP®

#### The Universal Connection

A conductor range from 0.08 to 35 mm<sup>2</sup>

#### Easy to Use

For all conductor types:

1. Open the clamping unit.
2. Insert conductor.
3. Release the clamp – done!

### POWER CAGE CLAMP

#### The Universal Connection for Large Conductors

A conductor range from 10 to 185 mm<sup>2</sup> (350 kcmil)

Connect 185 mm<sup>2</sup> (350 kcmil) conductors via spring pressure – only WAGO can do this.

#### Easy to Use

1. Rotate the T-wrench counter-clockwise to the stop.
2. Next, push in the orange locking tab. The clamp is locked open for hands-free wiring.
3. Insert a stripped conductor into the clamping unit until it hits the backstop.
4. A short counter-clockwise movement closes the clamp, securing conductor.

### PUSH WIRE®

#### Easy to Use

1. Sufficiently rigid solid and stranded conductors can be inserted directly – without tools.
2. Remove the conductor by simultaneously twisting and pulling the conductor.
